

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

The International Seismological Summary for 1919 July, August, September.

FORMERLY THE BULLETIN OF THE
BRITISH ASSOCIATION SEISMOLOGY COMMITTEE.

Attention may be called to the cases of deep focus on August 18d. 16h. 55m. 25s. and August 18d. 20h. 52m. 0s., when a focal depth 0·050 radius has been assumed as for the same epicentre (17°·0S. 177°·5W.) on 1918 May 22, though a smaller value would fit the present records rather better: and on August 31d. 17h. 20m. 34s., when a focal depth 0·015 radius is ventured.

Between the two shocks on August 18, presumably from the same focus, we have an interval of 236·6m.= $11 \times 21\text{m.} + 5\cdot6\text{m.}$ The case for a periodicity of 21m. is on its trial, and all pieces of evidence may be of value. The Helwan Observatory gives a number of records to which nothing corresponds elsewhere, and which may therefore be local shocks. It seems worth while to test them for the existence of a 21-minute periodicity, and the following comparison was made for the month of September, during which such records were numerous. The first date being taken as zero-point, multiples of 21·0min. indicated by the column N were subtracted from the records to form the column O-C. Brackets indicate cases where the mean of two instrumental records was taken; there seems no good reason for excluding these cases. If we collect the values of O-C. for each minute of the 21 we find that the cycle divides itself readily into two parts, of which one has 29 records in 11 minutes or 2·7 per minute, as follows:—

O-C.	-1	-2	-3	-4	-5	-6	-7	-8	-9	-10	+10
No.	2	2	5	2	1	2	5	4	1	2	3

and the other has 44 records in 10 minutes or 4·4 per minute, as follows:—

O-C.	0	+1	+2	+3	+4	+5	+6	+7	+8	+9
No.	6	6	5	0	3	5	5	3	4	7

This suggests further inquiry, which shall be made.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

July 14d. 14h. 22m. 0s. At 40° N. 60° E.?

$$A = +\cdot383, B = +\cdot664, C = +\cdot643.$$

If the records all refer to a single shock, the solution below is about the best we can get from the material. But it seems more probable that there were two shocks, one in India and one in Western Europe.

Additional records : Victoria PV = +1m.16s., MV = +3.6m. Cheltenham
 LN = +20.8m. De Bilt eN = +31m.0s., MN = +38.8m.

July 18d. 15h. 7m. 0s. Epicentre 24° 0N. 121° 0E. (as on 1919 July 17d. 9h.).

$$A = -470, B = +783, C = +407.$$

The solution is not satisfactory, but no solution suggests itself which will suit all three near stations. Difficulties appeared also on 1919 July 17d. and 1918 April 18d.

Athens gives also MN = +2.4m., T_e = 0h.4m.4s. Rocca di Papa P = +4m.4s.

July 20d. Records also at 6h.25m.20s. (between Mizusawa, Tokyo, and Osaka), 8h. (Chicago, Batavia, and Manila), 15h. 39m.0s. (close to Batavia), 16h. (San Fernando and Tokyo).

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

99

July 21d. 19h. 3m. 53s. Epicentre 3° 0S. 100° 9E. (adopted from Batavia).

$$\Delta = -189, \quad B = +.981, \quad C = -.052; \quad D = +.982, \quad E = +.189; \\ G = +.010, \quad H = -.051, \quad K = -.999.$$

There was apparently more than one shock about this time. The Osaka records indicate one close to Osaka, and the Athens records one close to Athens; but it does not seem likely that the latter is responsible for the other European records.

	Δ	Az.	P.	O-C.	S.	O-C.	L.	M.

NOTES TO JULY 22d. 22h. 1m. 25s.

Additional records: Vieques gives PN = +4m.41s. Cheltenham PN = +5m.56s., LN = +12.6m., MN = +22.3m. Georgetown IPN = +5m.47s., IPZ = +5m.46s., SZ = +10m.28s., eLZ = +12.1m., T₀ = 22h.1m.25s. Chicago PR₁ = +7m.19s. Ann Arbor. The records above are for the Bosch inst. The Wiechert gives P = +6m.5s., with others the same as above. Ithaca N sensibly same as E, T₀ = 22h.1m.42s. Toronto i = +10m.5s., T₀ = 22h.0s.42s. Ottawa i = +7m.12s., e = +7m.45s., e = +12m.55s., i = +14m.41s., T₀ = 22h.1m.25s. La Paz T₀ = 22h.1m.24s. Uccle PR₁ = +15m.10s., T₀ = 22h.1m.35s. De Bilt ePR₁E = +15m.16s., e(SR₁) = +28m.10s., m = +28m.24s., m = +28m.32s., eLN = +34.6m., MN = +45.9m., T₀ = 22h.1m.35s. Strasbourg T₀ = 22h.1m.38s. Hamburg T₀ = 22h.2m.45s. Vienna i = +13m.22s.

July 22d. Records also at 0h. (Lick), 2h. (Barcelona), 8h. (Manila), 15h. (Batavia), 17h. (Manila and Florence), 19h. (Mizusawa, Florence, and Helwan).

July 23d. Records at 0h. (San Fernando), 0h. (Batavia), 9h.53m.0s. (close to Athens), 18h. (Manila), 19h.30m.35s. (Mizusawa, perhaps repetition from 38°.5N. 144°.5E., as on July 21d. 23h.), 20h. (La Paz).

109. July 24d. 2h. 3m. 20s. Epicentre 40°.0N. 76°.0E.

$$A = +.185, B = +.743, C = +.643; D = +.970, E = -.242; G = +.155, H = +.624, K = -.766.$$

Since an epicentre near this (37°.5N. 70°.0E.) on 1917 April 21 was found to have a deep focus, the present observations were discussed for this possibility, but without a positive result.

Osaka	6.2	270	1 36	+ 1	—	—	2.3	3.1

It is not easy to reduce these residues much by changes in adopted elements, and it seems a fair presumption that the shock is preliminary to that of August 3.

July 26d. Records also at 4h.16m. (close to Mizusawa), 5h.43m. (close to Mizusawa), 9h.17m. (near Tokyo and Mizusawa, possibly as at 13h.), 11h. (Helwan), 20h. (Perth), 22h. (San Fernando).

July 27d. 21h. 49m. 10s. Epicentre $36^{\circ}0\text{N}$. $134^{\circ}0\text{E}$.

$A = -562$, $B = +582$, $C = +588$.

A position near $34^{\circ}0\text{N}$. $138^{\circ}0\text{E}$. would suit equally well, but is nearer Tokyo, where the shock was not recorded.

Riverview	49.7	128	9 20	+15	—	—	13.9

Manila ($\Delta = 27^{\circ}6$) records e = +40s., which must refer to a separate shock. No way of reconciling all three records suggests itself.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

103

July 29d. 19h. 25m. 0s. Epicentre 33° 3N. 9° 0W. (as on 1918 April 1d.).

$$\Delta = +\cdot 826, B = -\cdot 131, C = +\cdot 549; D = -\cdot 156, E = -\cdot 988; G = +\cdot 542, H = -\cdot 086, K = -\cdot 836.$$

	Δ	Az.	P.	O-C.	S.	O-C.	L.	M.
			m. s.	s.	m. s.	s.	m.	m.
San Fernando	3.9	35	1 12	+11	—	—	2.0	2.8
Tortosa	10.7	42	1 42	-62	—	—	4.0	5.0
Barcelona	12.0	44	—	—	—	—	e 5.3	5.8
Rocca di Papa	19.2	57	—	—	—	—	e 11.2	—
Strasbourg	19.7	34	—	—	e 9 0	+43	—	—
Uccle	20.1	26	—	—	e 9 18	+53	—	—
De Bilt	E.	21.4	24	—	e 9 36	+43	e 10.6	12.9

The S observations of Strasbourg, Uccle, and De Bilt suggest a more distant epicentre, but the evidence of San Fernando and Tortosa is against this. Perhaps the 3 records in question, which are simply given as e, are not S records at all, but L. De Bilt gives MN = +13.8m.

July 29d. Records also at 0h. and 2h. (San Fernando), 14h. (Helwan), 15h. (La Paz), 18h. (Barcelona).

July 30d. Records at 0h. (Pompeii), 3h. and 4h. (Florence), 9h.46m. (close to Rocca di Papa and another close to Zurich recorded also at Strasbourg and Florence), 20h. (La Paz), 21h. (Zi-ka-wei), 22h. (Zi-ka-wei and Lick (2)), 23h. (San Fernando).

July 31d. 21h. 52m. 50s. Epicentre 53° 5N. 159° 0W. (as on 1918 June 27d.).

$$A = -\cdot 555, B = -\cdot 213, C = +\cdot 804.$$

It seems impossible to reconcile the different records with a single shock. The above solution satisfies some of them approximately; others suggest another shock about three minutes later. The Strasbourg record is probably local (as on July 28), and a Lick ($\Delta = 30^{\circ} 3'$) record iP = +23m.33s., M = +23.7m. is clearly local, and has been relegated to the final note for July 31.

104

Aug. 3d. 9h. 45m. 0s. Epicentre $31^{\circ}5\text{N}$. $19^{\circ}5\text{E}$.

$$\begin{aligned} A &= +804, B = +285, C = +523; \quad D = +334, E = -943; \\ G &= +492, H = +174, K = -853. \end{aligned}$$

This epicentre fits the observations, but lies sensibly to the S.W. of the usual region. A mistake in any of the records would modify it considerably, e.g. if the Athens P is really S.

	Δ	Az.	P.	O-C.	S.	O-C.	L.	M.

107

Aug. 9d. 14h. 38m. 0s. Epicentre $48^{\circ}5\text{N}$. $28^{\circ}0\text{E}$.

$$A = +585, B = +311, C = +749.$$

The adopted epicentre lies outside the usual region, and the solution is otherwise unsatisfactory, for the residuals suggest a position nearer Vienna and Rocca di Papa, but further from the other stations, which are inconsistent requirements.

109

Aug. 15d. 4h. 23m. 50s. About $11^{\circ}0$ from Rocca di Papa, which records $eP = +2m.41s.$, $S = +4m.50s.$, $M = +5.3m.$. Pompeii gives $eP = +2m.54s.$, $M = +4.5m.$ The record of this shock would perhaps obscure that of the previous shock. Again some of the European records, credited to the above shock, may be really due to this, but it is not easy to specify the epicentre for this. Query $37^{\circ}0N.0^{\circ}?$.

Aug. 15d. Records also at 0h. (San Fernando), 5h. (Hamburg and Helwan), 10h. (near Sidney and Riverview), 12h. (Lemberg), 14h. (Helwan), 15h. (Edinburgh and Manila), 17h. (Lemberg and Mizusawa), 19h. (Kingston), 23h. (Rocca di Papa, San Fernando, and Lick).

Aug. 16d. Records at 4h. (San Fernando), 8h. (Colombo), 11h. 4m. 50s. (about 1° from Taihoku, which gives $P = +28s.$, $L = +0.7m.$, $M = +1.2m.$), 12h. (Helwan), 15h. (Manila), 16h. (Helwan), 19h. (Mizusawa), 21h. (Zurich), 22h. (Batavia).

Aug. 17d. Records at 2h. (San Fernando and Batavia), 5h., 8h., and 14h. (Helwan), 17h. (Nagasaki), 18h. (Mizusawa), 19h. (La Quiaca and La Paz.).

Aug. 18d. 11h. 17m. 30s. Epicentre $51^{\circ}0N. 34^{\circ}0W.$ (as on 1917 April 20d.).

$$A = +.521, B = -.352, C = +.777; D = -.559, E = -.829; \\ G = +.644, H = -.434, K = -.629.$$

Edinburgh	33.0	321	19 40	?M	—	—	—	—

De Bilt gives $iN = +10m.36s.$, $MN = +16.2m.$ Helwan PN = $+9m.40s.$ The solution fits certain stations (Vienna, Strasbourg, Uccle, De Bilt) fairly well, but other records are puzzling, especially those nearest the adopted epicentre, which suggests an origin much further away. It is not, however, easy to satisfy the two sets of conditions.

Aug. 19d. Records also at 0h. (Eskdalemuir, De Bilt, Uccle), 1h. (Sydney and Melbourne), 2h. (close to Balboa Heights), 3h. (Taihoku and Helwan), 4h. (Kew), 5h. (Taihoku and Rocca di Papa), 6h. (Kobe), 7h. (Rio Tinto), 9h. (Apia), 11h. (close to Athens), 21h. (Rocca di Papa and Florence (3)), 22h. (La Paz).

Aug. 20d. 3h. 58m. 0s. Close to Rocca di Papa, which gives P = +26s., S = +43s., M = 51s. Pompeii gives eP = +29s.

Aug. 20d. 11h. 12m. 30s. Close to Batavia, which gives P = +24s., S = M = +40s., and notes Malabar iS - P = 15s.

Aug. 20d. 19h. 32m. 10s. Close to Rocca di Papa, which gives eP = +8s., M = +2.6m. Pompeii gives eP = +59s., eS = +1m.39s.

Aug. 20d. Records also at 0h. (San Fernando), 9h. (Melbourne), 10h. (Colombo and Helwan), 15h. (Helwan), 21h. (San Fernando), 23h. (Taihoku (2) and Zi-ka-wei).

Aug. 21d. 9h. 39m. 15s. Close to Manila, which gives eP = +17s., L = +34s., MN = +37s.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

Additional records: Hokoto M = +1°0m. Zi-ka-wei MN = +5°0m., T₀ = 19h.34m.12s. De Bilt eLN = +43°8m., MN = +45°8m. Colombo and Kodaikanal probably record a local shock, as indicated by the short interval from P to M at Colombo. Strasbourg gives another vague record at +61°8m.

Aug. 28d. Records also at 2h. (San Fernando and Helwan), 14h. (La Paz and Helwan), 20h. (Helwan and San Fernando), 23h. (close to Osaka and Kobe).

1919. Aug. 29d. 5h. 43m. 45s. Epicentre 3°5S. 128°5E.

A = - .621, B = + .781, C = - .061; D = + .783, E = + .622; G = + .038, H = - .048, K = - .998.

This earthquake was originally assigned to the epicentre 2°0S. 133°0E., as on 1918 Jan. 21d.; but the residuals showed the solution to be defective and on discussion in the usual way indicated the above position, which was then seen to fall with some precision on the line through four other epicentres, as below. The column C for the latitude is from the formula 35°0 - 0.3 X long.

NOTES TO AUG. 31d. 17h. 20m. 34s.

Additional records: Apia P = +4m.40s., +5m.14s., +5m.22s. Riverview P_R = +5m.42s. and +6m.18s. PS = +9m.31s. T_o = 17h.20m.24s., 16°S. PR = 0s. Melbourne SR_I = +12m.50s. Adelaide SR_I = +13m.38s. Manila S = +14m.48s. MN = +17°7m. T_o = 17h.20m.40s. Osaka MN = +13°9m. T_o = 17h.20m.46s. Δ 6550km. Zi-ka-wei MN = +32°1m. T_o = 17h.20m.48s. Ootomari, L is probably S; time one minute wrong? Colombo S = +15m.44s. Cheltenham LN = +23°1m. MN = +24°3m. Colombo S = +15m.44s. Victoria records P = +7m.14s. (which must refer to some earlier shock—see text), and then P as S, and S as L. Berkeley ePN = +12m.34s. ePV = +12m.32s. eSV = +23m.43s. T_o = 17h.22m.53s. Lick records the earlier shock (see Victoria). Chicago PR = +25m.29s., probably SL = +59°4m. and +19°4m. Ann Arbor PE = +17m.56s. SE = +30m.26s. LN = +14m. MN = +69°4m. Toronto eL = +60°9m. eL = +65°1m. La Plata = +19m.38s. PR_I? i = +30m.38s. T_o = 17h.26m.12s. Ithaca eL = +19m.19s. eN = +36m.36s. eE = +37m.44s. eLN = +51°6m. Georgetown PN = +19m.48s. PR_I? Cheltenham PN = +20m.51s. = PR_I. LN = +51°9m. MN = +73°6m. Ottawa ePN = +18m.46s. = PR_I; e = +26m.34s. and +27m.56s. Helwan PN = +24m.8s. MN = +3°3m. Dyce i = +20m.2s. Hamburg i = +22m.59s. = PR_I. MZ = +74°4m. Vienna i = +19m.26s. eL = +51°4m. M = +87°4m. Edinburgh record at +72m.16s. Eskdalemuir PR = +22m.22s. Athens PR_E = +23m.6s. eLN = +100°7m. MN = +102°7m. De Bilt PR = +23m.9s. eLN = +67°4m. MN = +68°5m. T_o = 17h.19m.23s. 14°9S. 14°2E. Uccle iPR_I = +23m.8s. Strasbourg iPR_I = +23m.17s. Lew M = +100°im. Paris PR_I = +23m.21s. PR_I = +24m.11s. Coimbra ePN = +19m.47s. = [-14s.], PR_IN = +19m.39s. PR_N = +23m.15s. San Fernando MN = +124°4m.

NOTE TO 1919 AUGUST 31d. 17h. 20m. 34s.

The antipodal stations give fairly consistent residuals in [P]. If we take the first record for Coimbra from the Notes, i.e. [-14s.], instead of [-42s.] given by the E inst. in the Table, and exclude Rio Tinto (only given to whole minutes), they are

S.	S.	S.	S.	S.	S.	S.	S.	S.
+13	-4	-7	-9	-10	-12	-14	-15	-20
+11	-5	-7	-9	-12	-13	-14	-17	-20
-2	-5	-7	-9	-12	-14	-15	-18	-23

of which the mean is -13s., the mean numerical difference from this being ±1s. The probable error of the mean is thus about ±1s., and the focal depth indicated is about +.014 of the earth's radius. Of course, the determination of T_o is uncertain: the stations within 90° of the epicentre give the following corrections to T_o, determined from the S and P residuals:

S.	S.	S.
Otomari +65	Zi-ka-wei +11	Sydney -10
Melbourne +26	Osaka +10	Calcutta -46
Tachoku +17	Manila +2	Berkeley -58
Colombo +12	Adelaide -3	Apia -86

The question is whether we can reasonably increase all the residuals by +10s., which means correcting T_o by -10s., and it will be seen that it is difficult to justify this. The more consistent corrections to T_o (from +27s. to -11s.) have a mean value +8s. We proceed then to assume a focal depth .015 radius and to discuss a correction to the adopted epicentre. Grouped in azimuth we find the following corrections to Δ on the above supposition:

Station.	Az. Δ	Station.	Az. Δ	Station.	Az. Δ	Station.	Az. Δ
Victoria 40 (+1°0)	Sydney 210 +0°1	Calcutta 298 -0°9	Osaka 332 +2°4				
Honolulu 48 -2°4	Melbourne 212 +2°1	Manila 304 +2°4	Mizusawa 340 +1°5				
Berkeley 50 (+1°1)	Adelaide 225 -0°2	Taihoku 315 +3°1	Ootomari 346 +1°3				
Apia 90 -1°2	Zi-ka-wei 320 +2°0						

We see that the corrections indicated by Victoria and Berkeley are opposite in sign to the other two in the same group. In itself this would not justify in excluding them; but there is some evidence that they may not be true records. Victoria and Lick record an earlier shock, and though the S and L records for Victoria have been assigned to the P and S of this shock, the identification is doubtful. The Berkeley records may also be affected. Including them also we get five equations as below, separating Honolulu and Apia:

No. of Az. Stations.	δ Δ	Calc.	O - C.
48 1	-2°4 = +.74x + .67y	-1°2	-1°2
90 1	-1°2 = +1.00x + .00y	-2°2	+1°0
218 3	+0°7 = -.59x - .81y	+0°8	-0°1
309 4	+1°9 = -.78x + .63y	+2°2	-0°3
339 3	+1°7 = -.36x + .93y	+1°4	+0°3

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

121

The values of $\delta \Delta$ are equated to terms of the form $x x \sin Az + y x \cos Az$, and the values of x and y are found to be $x = -2^\circ.25$ $y = +0^\circ.68$, with which the column "Calc." has been formed. The column O-C shows that the major part of the discrepancies are removed by these assumptions. Hence we may give a revised solution for the epicentral stations in the following form:

Aug. 31d. 17h. 20m. 34s. Epicentre $15^\circ.7S$. $167^\circ.3E$.

$A = -940$, $B = +212$, $C = -271$. Focal depth $+0.15$.

Focus	Δ	Corr.		P.		O-C.		S.		O-C.		Former Residuals.	
		m.	s.	m.	s.	m.	s.	m.	s.	m.	s.	m.	s.
Apia	-0.8	20.3	i 4	34	- 3	i 9	1	+44	-37	-14			
Sydney	-0.7	23.4	5	2	-11	9	8	-11	-10	-9			
Melbourne	-1.0	29.7	6	44	+29	11	42	+30	+27	+29			
Adelaide	-1.1	32.1	6	26	-12	11	32	-19	-12	-19			
Honolulu	-1.5	50.3	i 8	50	- 9					-25			
Manila	-1.7	54.9	9	30	+ 3	(17	0)	+ 1	+ 6	+ 9			
Osaka	-1.8	58.8	10	0	+ 8	17	52	+ 6	+ 7	+ 5			
Mizusawa	-1.8	60.0	10	1	+ 1					- 1			
Taihoku	-1.8	60.4	10	17	+14	(18	18)	+12	+16	+15			
Zi-ka-wei	-1.9	64.1	e 10	34	- 8	e 18	56	+ 5	+ 7	+ 4			
Otomari	-1.9	66.1	11	48	+69	(20	25)	+70	+84	+82			
Calcutta	-2.1	86.2	12	14	-29	(22	56)	-13	-27	-12			
Colombo	-2.1	89.5	12	2	-59	(21	50)	-115	-58	-112			

Comparison of the new residuals with the former shows that there is a considerable improvement in the P for Apia and Honolulu; but for the other stations the effects of deep focus and alteration of epicentre neutralise each other. The example is valuable as showing how the effects of a deep focus may be obscured by altering the epicentre and neglecting one or two outstanding results.

Aug. 31d. Records also at 1h. (Helwan and De Bilt), 6h. (Taihoku), 9h. (Azores), 17h. (Kobe), 19h. (La Paz), 22h. (Edinburgh).

Sept. 1-21. For a series of Helwan records see Introductory Note to this number of the Summary (preceding July 1).

Sept. 1d. 13h. 14m. 30s. Epicentre $22^\circ.0S$. $170^\circ.0E$. (as on 1919 Jan. 12d.).

$A = -913$, $B = +161$, $C = -375$; $D = +174$, $E = +985$;
 $G = +369$, $H = -065$, $K = -927$.

125

Sept. 8d. 4h. 8m. 0s. Epicentre $18^{\circ}0'N$. $97^{\circ}0'E$. (as on 1917 April 12d.).

$$A = -116, B = +0.944, C = +0.309; D = +0.993, E = +0.122; \\ G = -0.038, H = +0.307, K = -0.951.$$

The Batavia observations suggest an epicentre some $2^{\circ}0'S$., and it must then be further West to suit Calcutta and Manila. But the material is so slight that this old epicentre has been retained.

There is some difficulty in separating this shock from that following. Possibly Coimbra observes the latter, though an error of 3 minutes seems more likely, and has been assumed in the columns O-C.

Coimbra gives iSN = +4m.14s.

Sept. 10d. 14h. 26m. 20s. Epicentre $44^{\circ}0\text{N}$. $2^{\circ}5\text{E}$. (as at 12h.3m.).

(It is assumed that this follows 4m.30s. later as before).

	Δ		S.	O-C.	L.	M.
			m. s.	s.	m.	m.
Paris	4.9		e 2 22	+8	3.7	3.7
Uccle	6.9		e 3 34	+27	—	—
De Bilt	E.	8.3	—	—	e 4.8	6.4
	N.	8.3	—	—	e 5.2	6.4

Note to the foregoing. The suggestion is that a shock under the epicentre $41^{\circ}5\text{N}$. $7^{\circ}0\text{W}$. are followed (in each of four cases) after an interval of 4m.30s. by a shock under the epicentre $44^{\circ}0\text{N}$. $2^{\circ}5\text{E}$. approximately. The material is scarcely good enough to define the latter with great precision, and its place has been adopted from a former occasion (1918 Feb. 5). The distance between the adopted epicentres is $7^{\circ}4$, so that if one shock is caused by the other it must be by the L waves. The times adopted are :

h. m. s.	m.	h. m. s.
10 40 0	+4.9	10 44 30
10 56 5	0.0	11 0 35
11 58 30	-0.6	12 3 0
14 21 50	-4.3	14 26 20

The middle column represents deviations from a series of multiples of 21.0m.

Sept. 10d. 16h. 57m. 20s. Epicentre $43^{\circ}0\text{N}$. $12^{\circ}5\text{E}$. (as on 1917 May 11d.).

$A = +.714$, $B = +.158$, $C = +.682$; $D = +.216$, $E = -.976$;
 $G = +.666$, $H = +.148$, $K = -.731$.

Eskdalemuir ($\Delta = 16^{\circ}0$) records simply 17h.5m. to 17h.8m. Additional records Rocca di Papa C inst., IP = +0m.19s., ME = +1.2m., MN = +1.6m. Pola MN = +1.5m. Zurich iPE = +1m.33s., MN = +3.1m. Paris ePN = +2m.27s. Tortosa gives its P 10m. early. De Bilt MN = +6.4m. Hamburg MN = +9.0m. MZ = +8.0m. San Fernando Milne insta. agree except PN (-LN!) = +7m.40s. Coimbra LN = +7.7m.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

128

Sept. 10d. Records also at 4h. (San Fernando and Manila), 12h. (La Paz), 15h. Azores (2), 17h, 18m.50s. (close to Zurich, which gives ePE = +5s., ePN = +9s., iS = +10s. Pompeii P = +7m.38s.), 17h.24m.10s. (again close to Zurich, which gives eP = +3s., iS = +15s., iME = +16s., M = +23s., Rocca di Papa IP = +44s., M = +2m.8s.), 18h.16m.0s. (close to Azores P = +6s., M = +2.0m.), 18h.17m.20s. (close to Osaka, PS = +16s., ME = +0.9m., MN = +1.0m.), 19h. (San Fernando), 22h. (San Fernando).

Sept. 11d. 0h. 38m. 0s. Further repetition from 41°.5N. 7°.0W., as on Sept. 10d.? Coimbra (still 3m. in error ?), eP = +(3)m.36s., S = +(4)m.6s. Granada P = +1m.12s. Tortosa P = +1m.24s., L = +2.1m., M = +2.5m.

Sept. 11d. 5h. 31m. 0s. Epicentre 24°.5N. 143°.5E. (as on 1917 July 1d.).

$$A = -\cdot 732, B = +\cdot 541, C = +\cdot 415; D = +\cdot 595, E = +\cdot 804; G = -\cdot 333, H = +\cdot 247, K = -\cdot 910.$$

Mizusawa	14.9	355	4 10	+32	7 11	+41	—
La Paz	149.3	100	19 32	[-22]	—	—	—

If the La Paz record really belongs to this shock, it is remarkable that there should be no records from intermediate stations.

Sept. 11d. 13h. 47m. 50s. Epicentre 11°.5N. 144°.0E. (as on 1918 Jan. 12d.).

$$A = -\cdot 793, B = +\cdot 576, C = +\cdot 199.$$

(Very uncertain : perhaps further south).

La Paz	148.4	103	—	—	24 2	?PR ₁	—

Sept. 11d. 13h. 49m. 30s. Epicentre 19°.0N. 68°.0W. (as on 1917 July 27d.).

$$A = +\cdot 354, B = -\cdot 877, C = +\cdot 326; D = -\cdot 927, E = -\cdot 375; G = +\cdot 122, H = -\cdot 302, K = -\cdot 946.$$

	△	Az.	P.	O-C.	S.	O-C.	L.	M.
	°	°	m. s.	s.	m. s.	s.	m.	m.
Vieques	E.	2.6	107	0 48	+ 2	—	—	1.0 1.3
	N.	2.6	107	0 40	- 1	—	—	1.1
Chicago	28.2	328	11 10	?S	(11 10)	+ 7	(14.1)	—
La Paz	35.5	180	e 12 52	?S	(e 12 52)	-11	43.6	44.9
De Bilt	N.	64.8	40	—	—	—	e 29.5	57.4

Chicago gives S as P and L as S, also L = +16.2m. and 19.6m. It seems clear that the La Paz record does not belong to this (comparatively near) epicentre, but possibly to the preceding shock across the globe.

Sept. 11d. 14h. 11m. 30s. Repetition from 19°.0N. 68°.0W. (as at 13h.49m.?). Vieques gives PE = +31s., PN = +30s., LE = +37s., LN = +36s., ME = +1.2m., MN = +1.3m.. De Bilt ($\Delta = 64^{\circ}.8$) gives eLE = +29.5m., agreeing with eLN for former shock. The interval between the two is 22.0m.

Sept. 11d. Records also at 0h. (Zurich), 1h.45m., 2h.6m., 2h.29m. (Azores : the intervals are close to 21m.), 10h. (Athens), 12h. (Batavia), 14h. (Helwan), 19h. (San Fernando), 21h. (Tucson and Berkeley), 22h. (De Bilt).

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

Tortosa	177·8	238	22 20	—	—	—	107·3	110·6

Eskdalemuir ($\Delta = 166^{\circ}6$) gives simply 6h.40m. to 8h.26m. Additional records : Riverview gives IP = +5m.32s., IPS = +9m.27s., T₀ = 6h.5m.37s. Melbourne SR₁ = +13m.26s. Adelaide PR = +9m.20s., SR = +12m.56s. La Paz gives T₀ = 6h.9m.18s. Helwan PN = +45m.20s. = LN? De Bilt eE = +31m.50s.

Sept. 12d. 6h. 57m. 30s. A shock is recorded at several stations, but it is difficult to assign the epicentre. The time is taken from Kodaikanal, which records P = +5m.48s., L = +14·1m., M = +16·8m., indicating $\Delta = 28^{\circ}$. But Coimbra gives eL = +36·2m.; Edinburgh L = +37·5m., M = +59·5m.; Paris eL = +41·5m.; Algiers eL = +45·5m., M = +50·0m.; and San Fernando P = +51·5m., and these are not accordant enough to identify the epicentre.

Sept. 12d. 12h. 23m. 40s. Epicentre $42^{\circ}0\text{S}$. $178^{\circ}0\text{E}$. (as at 6h.).

	Δ	Az.	P.	O-C.	S.	O-C.	L.	M.
			m. s.	s.	m. s.	s.	m.	m.
Sydney	22·6	282	4 50	-22	—	—	11·1	11·9
Riverview	22·6	282	e 5 19	+ 7	—	—	e 11·0	12·1
Melbourne	25·5	268	—	—	11 20	+67	15·7	16·8
Adelaide	29·5	20	—	—	11 44	+18	17·2	19·5

Additional records : Riverview MN = +12·0m. Melbourne SR = +13m.38s.
Adelaide SR = +13m.50s.

Sept. 12d. 13h. 49m. 40s. Epicentre $48^{\circ}0\text{N}$. $148^{\circ}0\text{E}$.

$A = -567$, $B = +355$, $C = +743$; $D = +530$, $E = +848$;
 $G = -630$, $H = +394$, $K = -669$.

It seems possible that there were two shocks; for instance, the Moncalieri observations can scarcely be explained otherwise.

Additional records: La Paz T₀ = 12h.18m.58s. Andalgalala: In forming O-C. an error of 10min. has been assumed; MN = +16.4m. Pilar, S is entered as PN. Washington T₀ = 12h.19m.17s. Georgetown records also 1 at +22m.27s. and +30m.36s. Ithaca 1N = +19m.8s. Toronto two early records at i = 12h.19m.6s. and i = 12h.20m.48s. and several L records +15.2m., +19.3m., +34.7m., and eL = +36.6m. Chicago L = +39.3m., T₀ = 12h.18m.7s. Ottawa, P is entered as iN and S as iE; also iV = +2m.30s., eLE = +25.8m., L = +36.8m. San Fernando, Milne machine gives P = +12m.38s. Coimbra SR₁ = +28m.2s., MN = +47.6m., T₀ = 12h.19m.13s. Barcelona MN = +55.0m. Paris PR₁ = +17m.12s., MN = +43.8m., T₀ = 12h.19m.58s. Edinburgh PR₁ = +17m.2s., PR₂ = +19m.10s., SR₁ = +29m.58s. Uccle 1N = 12h.20m.4s. De Bilt PR₁ = +17m.33s., eSN = +25m.4s., e = +26m.26s., MN = +52.2m., T₀ = 12h.19m.22s. Hamburg T₀ = 12h.21m.24s. Helwan PN = +21m.2s., MN = +65.9m.

There seems to have been several shocks. One, earlier than those tabulated, near Toronto and Ottawa; see the notes to those stations. Possibly one later than those tabulated, as shown in the Table by Rio de Janeiro, Mendoza, and Cipolletti. The double shock indicated at head seems to be a case where a larger shock follows a smaller, the smaller being caught at the near stations,

Continued on next page.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

132

while only the larger reaches the distant ones. The records have all been referred to T_0 (1) = 12h.19m.10s., and those which show the later shock are presumed to be

	Δ	P.	S.		Δ	P.	S.
	°	s.	s.		°	s.	s.
Ithaca	59.4	+ 57	+ 51	Moncalieri	86.4	+ 38	+ 7
Coimbra	73.9	+ 52	+ 108	Uccle	87.1	+ 34	+ 30
Granada	75.1	+ 94	+ 148	Strasbourg	88.0	+ 39	—
Algiers	79.6	—	+ 73	De Bilt	88.3	+ 34	+ 27
Tortosa	79.8	+ 52	+ 79	Rocca di Papa	88.4	+ 44	+ 25

Paris	85.1	+ 83	+ 41	Mean	+ 57	+ 53	
Edinburgh	85.9	+ 37	+ 29				

The range of these residuals is considerable, and the mean values cannot be regarded very seriously; but part of the discordance may be due to the errors of the Tables near $\Delta = 90^\circ$. The general accordance of P and S suggests that the epicentre is correct, and the testimony of La Paz, Pilar, Washington, Georgetown, and Ottawa seems sufficient to establish the earlier shock.

Sept. 13d. 17h. 29m. 10s. Epicentre $15^\circ.2$ S. $61^\circ.0$ W. (as at 12h.).

	Δ	Az.	P.	O-C.	S.	O-C.	L.	M.	m.

Manila assigns epicentre adopted. Zi-ka-wei gives MN = +13.8m., T₀ = 9h.4m.40s., Kobe MN = +8.9m., Osaka MN = +10.3m., Batavia MN = +10.9m., Calcutta PN = +6m.18s., Riverview MN = +25.9m., Vienna PR₁ = +16m.8s., Hamburg MN = +49.6m., T₀ = 9h.7m.6s., De Bilt eLN = +44.2m., MN = +51.5m., Uccle MN = +51.0m., Montalieri MN = +53.8m., T₀ = 9h.7m.31s., Bidston S = +32m.34s., Coimbra ePN = +27m.48s., L = +56.1m., San Fernando (Milne) P = +61m.9s., L = +65.3m., MN = +67.7m. Both instruments MN = +67.7m., Chicago L = +65.3m., Ottawa L = +69.2m., Toronto L = +33.9m. Georgetown records have been diminished by 1h., eN = +20m.29s.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

137

1919. Sept. 26d. 19h. 39m. 20s. Epicentre 6°3N. 123°2E. (as given by Manila and De Bilt).

$$A = -544, B = +832, C = +110; \quad D = +837, E = +548; \\ G = -060, H = +092, K = -994.$$

The epicentre of 1917 Nov. 16d. 22h., viz., 6°0N. 125°0E., was first tried, and the residuals indicated a change to 7°2N. 124°0E., i.e., in the direction of the Manila epicentre in both co-ordinates, though not by the appropriate amounts. The Manila epicentre was therefore adopted. The La Paz and Coimbra records suggest that the focus is higher than normal, but on trial the stations near the epicentre did not support this hypothesis.
