

The scanned images of the bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and collected by SGA Storia Geofisica Ambiente (Bologna) on behalf of the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

The International Seismological Summary.

1944 October, November, December.

INTERNATIONAL GEODETIC AND GEOPHYSICAL UNION.
ASSOCIATION OF SEISMOLOGY.
FORMERLY THE BULLETIN OF
THE BRITISH ASSOCIATION SEISMOLOGY COMMITTEE.

The Director of the I.S.S. wishes to express his thanks to U.N.E.S.C.O. and H.M. Treasury for financial support, which has covered the cost of preparation of this volume.

The last quarter of 1944 contains 92 epicentres, 38 of which are repetitions from previous determinations.

Cases of abnormal focal depth are noted below :—

Oct.	2d. 17h.	14·0N.	90·1W.	0·020

Dec. 7d. 4h. 35m. 39s. Epicentre 33°·7N. 136°·2E.

Felt over a wide area extending from Sendai and Akita in the North to Kumamoto and Miyazaki in South-West. Heavy losses and many casualties in the meizoseismal district of Kinki and southern part of Tyubu. A large tsunami occurred along the Pacific coast from Tyosi to Tosa, Simidu. This reached a height of 6 metres off the coast of the Kii peninsula, causing additional damage by flooding.

Intensity IX at Tu and Omaesaki; VII at Owase, Kohu, Nagoya, Gihu, and Hukui; VI at Sumoto, Kyoto, Kobe, and Kōti; V at Osima, Ito, and Mera; IV at Kakioka, Saga, and Sakata. Macroseismic radius 620km.

H. Kawasumi.

Chur (10·2) e=39m.0s.

The figures in brackets are distances in degrees from the approximate epicentre.

The scanned images of the bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and collected by SGA Storia Geofisica Ambiente (Bologna) on behalf of the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

1944

357

Dec. 30d. 22h. 2m. 51s. Epicentre 42°·0N. 130°·5W. (as on 1944 July 21d.).

Pasadena suggests off coast of Oregon. Identification with the shock of 1944 July 21d. is doubtful.
