

# SEISMOLOGICAL BULLETIN 1931.

## BATAVIA OBSERVATORY, JAVA.

Foundation: River Quaternary.

Greenwich Civil Time. S. Latitude  $6^{\circ} 11' 0''$ . Height above sealevel 8 m.

E. Longitude  $7^{\text{h}} 7^{\text{m}} 20.3^{\text{s}}$ . (1)

WIECHERT Horizontal Pendulum, 1000 kilograms.

WIECHERT Vertical Pendulum, 1300 kilograms.

### PREFACE.

The astatic seismograph of WIECHERT of 1000 kg is registering regularly since December 6<sup>th</sup> 1908; the vertical seismograph since July 9<sup>th</sup>, 1926.

The instruments are mounted on heavy brick pillars in a room with thick walls (about 70 centimeters) that is protected against the sun's heat by open galleries around it. The horizontal components are placed in E-W and N-S direction respectively.

The writing styles are lifted electrically every hour for a period of 10 seconds by the Javanese observer on duty. A lifting of two seconds every minute is given by an electrical impulse dial of the Synchronome Company Ltd., London.

For each month the mean constants for that month are applied.  $T_0$  and  $\epsilon$ , the oscillation period and the coefficient of damping, are determined every week.  $V$ , the magnification for very short waves, is determined occasionally only. It is found for the horizontal pendulum by direct measurement, giving the pendulum a displacement by means of the horizontal adjusting screw, the value of which can be determined easily from the pitch ( $a$ ), the angle of displacement of the screws and the height of the screws ( $b$ ) and of the centre of gravity ( $c$ ) above the Cardanic suspension apparatus.

It was found

$$(a) = 1.407 \text{ mm}; (b) = 1225 \text{ mm}; (c) = 895 \text{ mm}.$$

The *notation used* is that of the Göttingen Geophysical Institute.

The following abbreviations are employed:

### CHARACTER OF THE EARTHQUAKE.

I = perceptible; II = moderately strong; III = strong.

d (terrae motus domesticus) = local.

v ( " " vicinus) = near (less than 1000 km).

r ( " " remotus) = distant (1000 to 5000 km).

u ( " " ultimus) = very distant (over 5000 km).

(1) For the E. Longitude of the Observatory, see: J. BOEREMA, Determination of the Eastern Longitude of Batavia; K. Magn. Met. Observ. Batavia, Verhandelingen No. 12, 1924.

P (undae primae) = 1<sup>st</sup> preliminary tremors.

S ( " secundae) = 2<sup>nd</sup> " "

L ( " longae) = principal phase, long waves.

M ( " maximae) = maximum amplitude.

C (coda) = prominent waves among the after tremors.

F (finis) = end of perceptible movement.

PR<sub>1</sub>, PR<sub>2</sub>, . . . . . SR<sub>1</sub>, SR<sub>2</sub>, . . . . . = 1<sup>st</sup>, 2<sup>nd</sup> . . . . . reflected waves of P and S.

PS = waves changed by reflection from longitudinal to transversal oscillation.

WAVE-ELEMENTS, UNITS.

T = complete period in seconds.

A = amplitude, measured from median position in microns.

A<sub>E</sub> = E.-W. component of A.

A<sub>N</sub> = N.-S. " " "

i (impetus) = abrupt commencement, clearly defined.

e (emersio) = gradual commencement, not clearly defined.

MALABAR.

Foundation: Volcanic.

S. Latitude 7° 13'; E. Longitude 107° 37'; Height above sea-level 1550 m.

WIECHERT Horizontal Pendulum 100 kg, NS and EW component. Since July 1911.

Time Signals by Malabar Radio.

Possession of Mr. R. A. KERKHOVEN.

AMBOINA.

Foundation: Quaternary.

S. Latitude 3° 42'; E. Longitude 128° 10'; Height above sea-level 4 m.

WIECHERT Horizontal Pendulum 1000 kg, NS and EW component. Since October 1924.

Time Signals by Malabar Radio.

MEDAN.

Foundation: Quaternary.

N. Latitude 3° 35'; E. Longitude 98° 41'; Height above sea-level 25 m.

WIECHERT Horizontal Pendulum 1000 kg, NS and EW component. Since July 24<sup>th</sup>, 1929.

Time Signals by Malabar Radio.

The distances given in the Bulletin Batavia are calculated with the time tables of Dr. S. W. Visser. See Verhandelingen Batavia No. 22, 1930. The following table is an extract of these tables.

Distance.	S-P	P-O	S-O	Distance.	S-P	P-O	S-O
