READINGS FROM SEISMOGRAMS, JANUARY 1954

Readings from two Milne-Shaw (horizontal) seismographs recording North and East components respectively. T = 12 secs., damping ratio 20 : 1, magnification 250.

Position:- latitude 54°46'N, longitude 01°35'W, height above M.S.L. 103 metres.

There have been time when both the instruments have not recorded.

The readings marked with an asterisk (*) are from a trial short period Willmore seismograph; the trial finished on 15th December, 1953.

Addition and correction to December list.
