Bulletin of the seismological station

I V I G T U T

$\varphi = 61^\circ 12' \text{ N.}$   $\lambda = 48^\circ 11' \text{ W.}$   $h = 20 \text{ m.}$

Lithologic Foundation : Gneiss.

INSTRUMENTS

Willmore. Z.  $T_p = 1 \text{ sec.}$   $T_g = 0.25 \text{ sec.}$  Only 18/9 - 28/10 1957.

Milne-Shaw. N.  $T_o = 12 \text{ sec.},$   $v = 22:1,$   $V_o = 325$   
Recording speed = 15 mm/min.

NOTE ON THE CLOSING-DOWN OF THE STATION

p. 2

SEISMOLOGICAL READINGS

p. 3

Phases are indicated by the symbols used in ISS.  
Times are given in GMT. Positions of epicenters are  
most often due to USCGS. The periods given are periods  
of full oscillations. The amplitudes are single amplitudes  
of the ground. + indicate ground motion towards the north  
or upwards. - indicate the opposite direction.

MICROSEISMIC READINGS 1957 - 1958

p. 13

ADDITIONAL MICROSEISMIC READINGS 1957-1958

p. 25

MICROSEISMIC STORMS 1959

p. 29

REGULAR WORLD DAYS AND WORLD METEOROLOGICAL INTERVALS 1959

p. 33

For every group of figures the first one indicates  
the character of the microseisms. 1 is group microseisms,  
2 is continuous microseisms, 3 is irregular or mixed  
microseisms. Thereafter the single ground amplitude in  
microns is given, and at last the period of a full  
oscillation is stated. The given hours are GMT.

IVIGTUT

Due to heavy blastings in the nearby cryolite quarry the Wiechert instruments were damaged in 1952 and the recording was definitively stopped in 1953.

In 1955 the Wiechert instruments were inspected and it was found impossible to repair the instruments in Ivigtut. An old Milne-Shaw seismograph equipped with a Galitzin-recorder was installed in order to restart the seismic station. The Milne-Shaw seismograph withstood the blastings. Occasionally the mirror was thrown off its suspension.

In 1957 it was attempted to improve the station according to the IGY by installing a Willmore short-period vertical seismograph. But owing to a breakdown in the recorder this seismograph ran for about one month only. The records showed so much seismic noise, that the experiment was not repeated.

The Milne-Shaw recording was maintained with interruptions until June 1960, when the wireless operator who took care of the station, left Ivigtut.

It has been planned to improve the seismic effort in West Greenland, but owing to the high level of microseisms and man-made noise and the lack of a qualified operator, the station has to be moved to a place farther north.

Therefore this is the last seismic bulletin from Ivigtut.
