# THE SEISMOLOGICAL BULLETIN OF TAIWAN WEATHER BUREAU

January–March 1956.  
VOL. III, No. 1

臺灣省氣象所

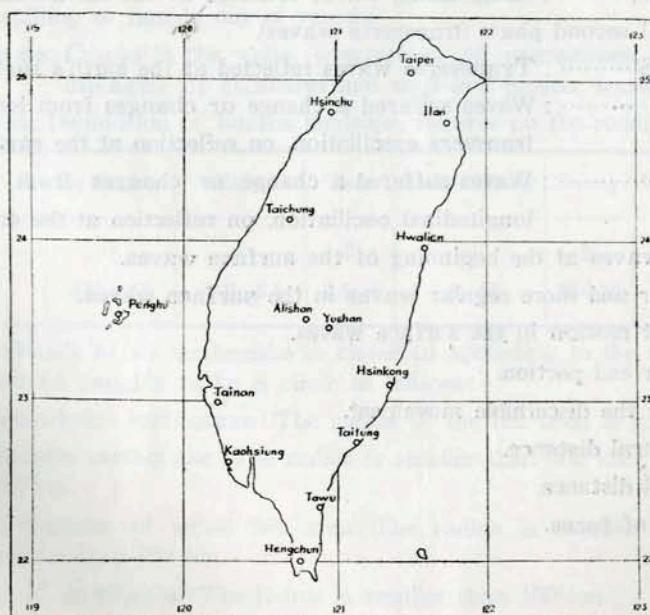

Published by Department of Seismology,  
TAIWAN WEATHER BUREAU.  
No. 64. Kung Yuan Road, Taipei, Taiwan  
China.

## Geographical coordinates of the Seismological Station, Taiwan China.

 $\lambda$  : Longitude  $\varphi$  : Geographical Latitude $\varphi'$  : Geocentric Latitude $a = \cos\varphi' \cos\lambda$   $b = \cos\varphi' \sin\lambda$   $c = \sin\varphi'$ 

Station	$\varphi$ ;(N)	$\lambda$ ;(E)	$\varphi$	Altitude	Subsoil	a	b	c	Seismographs
Alisian(mt.)	23.31°	120.48°	23.22°	2406.1 m	Mioceme Sandstone	- 0.4700 + 0.7885 + 0.3966			W (H. V.) O. S <sub>2</sub>
Hengchun	22.00	120.45	21.52	22.3	Alluvium	- 0.4745 + 0.7976 + 0.3724			W (H. V.) O. S <sub>1</sub>
Hsinknog	23.06	121.22	22.58	36.5 "	"	- 0.4793 + 0.7862 + 0.3901			P <sub>1</sub> S <sub>2</sub> W (H. V.)

Map showing the position of Seismological Station in Taiwan, China.

## Specification of instruments:-

Mass of the pendulum	M (kg)	Coefficient of friction	$\frac{r}{T_e^2}$ (mm/sec <sup>2</sup> )
Magnification	V.	Proper period of the pendulum T <sub>e</sub> (sec.)	
Damping coefficient	$\xi$ .		

The Constants of Seismographs at Taipei for the Month of January are as follows, and those constants at the other stations are nearly the same.

Seismographs	Component	M.	V.	$\xi$ .	$\frac{r}{T_e^2}$	T <sub>e</sub>
W(H) : Wiechert's horizontal seismograph	E-W	200	77	9	0.004	5.1
	N-S	200	78	9	0.005	5.1
	U-D	80	75	8	0.003	5.1
W(V) : Wiechert's Vertical seismograph						
P <sub>1</sub> : Portable seismograph (1)	E-W	18	40	8	0.005	5.1
	N-S	18	40	8	0.005	5.1
O : Omori's horizontal seismograph	E-W	15	20	3	0.002	15.7
	N-S	15	20	3	0.003	15.1
S <sub>2</sub> : Strong motion seismograph	E-W	2	2	4	0.004	3.8
	N-S	2	2	4	0.004	3.8
	U-D	1.5	2	8	0.004	3.5
P <sub>2</sub> : Portable seismograph (2)	E-W	10	20	2	0.015	4.0
	N-S	10	20	2	0.025	4.0
	U-D	7.5	20	2	0.018	4.0
A : Acceleration Seismograph	E-W	15	220	10	0.5	0.10
	N-S	15	220	10	0.9	0.10
	U-D	15	170	10	0.9	0.08

The present publication inserts the following explanation of the notations only in the first number hereafter.

## 1. Phase.

P : Normal first phase (Longitudinal waves)

pP, PP, PPP, ..... : Longitudinal waves reflected at the earth's surface.

S : Normal second phase (transverse waves).

sS, SS, SSS, ..... : Transverse waves reflected at the earth's surface.

PS, PPS, ..... : Waves suffered a change or changes from longitudinal to transvers oscillation, on reflection at the earth's surface.

SP, SPP, ..... : Waves suffered a change or changes from transeverse to longitudinal oscillation, on reflection at the earth's surface.

L : Long waves at the beginning of the surface waves.

Q : Shorter and more regular waves in the surface waves.

M : Largest motion in the surface waves.

C : Tail or end portion.

F : End of the discernible movement.

△ : Epicentral distance.

△H : Focal distance.

H : Depth of focus.

$\mu$  : Micron.

P-S : Duration of Preliminary tremor.

## 2. Nature of the motion.

i : Sudden commencement of a phase.

e : Gradual or indistinct commencement of a phase.

? : Questionable or uncertain.

## 3. Period and Initial motion.

T : Period, duration of one complete oscillation.

I : Amplitude of the true displacement of the ground from the position at rest.

I<sub>N</sub> : N-S component of I.

I<sub>E</sub> : E W component of I.

I<sub>Z</sub> : Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

## 4. Scales of seismic intensity.

The intensity of the shock is estimated according to the scales O-VI, as follows:  
 O, No feeling: Shocks too weak to cause human feelings, registered only by seismographs.

I, Slight: Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II, Weak: Shocks felt by most persons, slight shaking of doors and latticed sidding doors.

III, Rather strong: Slight shaking of houses and buildings, rattling of doors and latticed s'idding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV, Strong: Strong shaking of houses and buildings, overturning of unstable objects spilling of liquids out of vesels.

V, Very Strong: Cracks in the walls, overturning of gravestones, etc., lanterns etc., damaging of chimneys and mud-and-plaster warehouses.

VI, Disastrous: Demolition of houses landslips, fissures on the roads, the ground etc.

	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
Scale	O	I	II	III	IV	V	VI
Acceleration (gal)	0.25—0.8	0.8—2.5	2.5—8	8—25	25—80	80—250	250<

5. The magnitude of an earthquake is classified according to the radius of the felt area assumed, roughly to be a circle as follows:-

(r) Remarkable earthquake: The radius of the felt area is greater than 300 km.

(m) Moderate earthquake: The radius is smaller than 300 km. but greater than 200 km.

(s) Earthquake of small felt area: The radius is smaller than 200 km. but greater than 100 km.

(l) Local earthquake: The radius is smaller than 100 km.

- (d) Distant earthquake: The epicentral distance is greater than 300 km. from the coast of Taiwan.
6. The depth of hypocenter is as a rule expressed in terms of kilometers. If it is not determined so definitely, the following scale will be adopted.

Class	Very shallow	Shallow	Rather deep	Deep
Depth	3~30 km.	30~100 km.	100~200 km.	>200 km.

7. Geographical coordinates:

$\lambda$  : Longitude (E)       $\varphi$  ; Latitude (N)

The coordinates are been experessed in degrees with one place of decimal.

8. Time

Time is referred to Greenwich Mean Time (G. M. T.)

### GENERAL ASPECT OF EARTHQUAKES.

January to March, 1956.

1) In January, the number of occurrence of earthquakes were recorded one hundred and nine which twelve of them were classified as felt earthquakes and the remains were the unfelt ones. Two felt earthquakes in this month, were classified as small felt area earthquakes and remains were local ones. Among these small felt area earthquakes one occurred in Taitung and another in Hengchun district, and among those local earthquakes seven were occurred in Hwalian two were occurred in Taitung but the last one was occurred in Tainan district.

There were sevn distant earthquakes recorded in this month. Their epicenters were located at Fiji Is. region, ( $23^{\circ}$ S. $179^{\circ}$ E.) Tonga Is. region, ( $25^{\circ}$ S.  $176^{\circ}$ W) Nicobar Is. ( $7\frac{1}{2}$ N,  $94^{\circ}$ E.), near coast of Ecuador ( $1\frac{1}{2}$ S. $86^{\circ}$ W.), New Britain ( $4\frac{1}{2}$ S.  $150\frac{1}{2}$ E.), and New Ireland ( $4$ S.  $152^{\circ}$ E.)

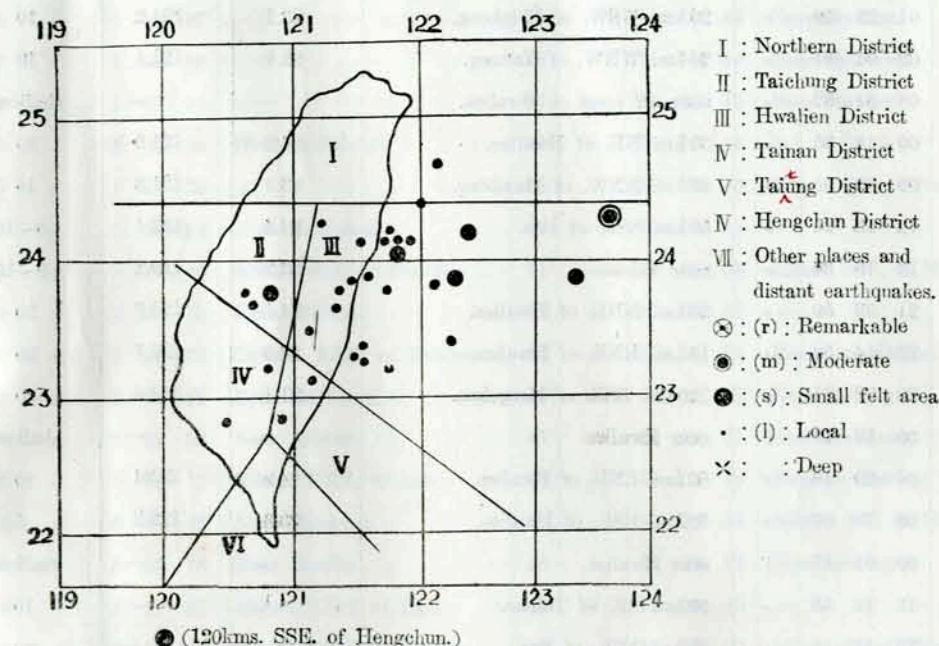

2) In February, the number of occurrence of earthquakes has an increase in comparison with January, and was amounted up to a figure of one hundred and twenty-six. Among them eight were classified as felt earthquakes and the remains were unfelt ones. One moderate earthquake occurred on 20th and its epicenter was located at  $24.4^{\circ}$ N.  $123.6^{\circ}$ E. and its depth was estimated about 60 km. Another three small felt area earthquakes, happened near coast of Hwalian. Among four local earthquakes two of them were occurred in Hwalian district, and the remains were located at Tainan and northern districts.

There were seventeen distant earthquakes recorded in this month, the epicenters of these earthquakes were located at Mariana Is. ( $19$ N.  $145\frac{1}{2}$ E.), coast of Luzon ( $19$ N.  $119\frac{1}{2}$ E.), and south Honshu of Japan. Twelve aftershock were recorded at coast of Luzon during the period from February 12nd to 15th.

3) In March, one hundred and sixty earthquakes were recorded and the total number has an increase in comparison to February. Thirteen of them were classified as felt earthquakes, and the remains were unfelt ones. The felt earthquaks in this month, one was classified as small felt area earthquake, and the remains were classified as local

ones. Five distant earthquakes were recorded at our stations, two of them occurred at The border between Burma-and India, one was at the northern coast of Hokkaido of Japan, and the remains were uncertain.

Epicenters of Felt Earthquakes in January to March, 1956.

Number of earthquakes classified according to its magnitudes

and Districts January to March, 1956.

Districts	Classification Magnitudes	Number of felt earthquakes					Number of unfelt earthquakes	Total
		Remark- able	Moderate	Small felt area	Local	Total

China.

## GENERAL ASPECT OF EARTHQUAKES

July to September 1956.

In July, the number of occurrence of earthquakes was amounted up to a figure of one hundred nineteen, and has an increase in comparison to the month of June. Among them, three were classified as local felt earthquakes and the remains were unfelt ones.

Among three felt earthquakes, tow were occurred near Hwalien and one was occurred near Hsinkong.

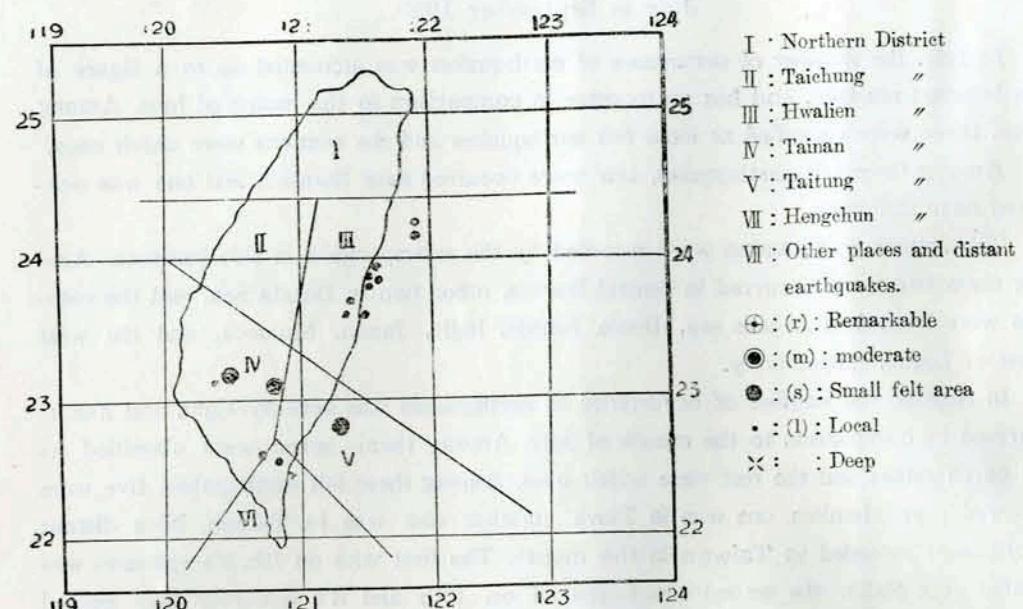

Ten distant earthquakes were recorded by the seismographs in this Institute. Among them two were occurred in central Burma, other two in Banda Sea, and the remains were located in Aegean sea, Bonin Islands, India, Japan, Molucca, and the west coast of Luzon, respectively.

In August, the number of occurrence of earthquake was seventy-eight, and has a decrease in comparison to the month of July. Among them, seven were classified as felt earthquakes and the rest were unfelt ones. Among these felt earthquakes, five were occurred near Hwalien, one was in Tawu, another one was in Tainan. Nine distant earthquakes recorded at Taiwan in this month. The first was on 7th. it's epicenter was located near Naha, the second was happened on 13th and it's epicenter was located near south coast of Japan, the fourth and fifth were occurred in Northern Celebes on 15th, the sixth was happened near Aleutian islands on 24th, and the remains were on 27th and 29th, but it's epicenters were unknown.

In September, fifty-nine earthquakes were recorded, six of them were classified as felt earthquakes and the remains were unfelt ones. These earthquakes are fe't ones. in this month; among them three were classified as small area earthquakes and the other three were c'assifiedas local earthquakes. Among these felt earthquakes, two were occurred near Hwalien, and the rest four were occurred near Tawu, Tainan, Taitung, Hsinkong region respectively.

Four distand earthquakes were recorded at Taiwan. The first was occurred on 16th it's epicenter was reported at Afghanistan. Another was happened on 29th, but it's epicenter was unknown. Third and fourth were occurred in Japan on 30th.

## Epicenters of Felt Earthquakes in July to September, 1956

Number of earthquakes classified according to it's magnitude and districts July to September, 1956.

Classification magnitudes Districts	Number of felt earthquakes					Number of unfelt earthquakes	Total
