Краткие сведения о сейсмической станции

"Апатиты" и ее аппаратуре

1. Координаты станции:

широта $67^{\circ}33,5'$ С

долгота $33^{\circ}26,5'$ В

альтитуда 182 м

2. Аппаратура:

а) четырехкомпонентный комплект (один вертикальный и три горизонтальных) сейсмографов общего типа конструкции Д.П.Кирноса;

б) трехкомпонентный комплект сейсмографов регионального типа конструкции Д.А.Харина.

3. Постоянные приборов (определены 26 июня - 4 июля 1958 г.)

| Соста- вляю- щая | Тип прибо- ра | l см | T_1 сек. | D_1 | T_2 сек. | D_2 | β | δ^2 | T_m сек. | V_m |

*) Горизонтальные сейсмографы ориентированы: I компонента - с С на Ю (первое направление считается положительным); II компонента - с ЮВ 60° на СВ 60° и III компонента - с ЮЗ 60° на СВ 60° .

- 4 -

- l - приведенная длина маятника;
 T_1 - период собственных колебаний маятника;
 T_2 - период собственных колебаний гальванометра;
 T_m - период, при котором увеличение системы сейсмограф-гальванометр достигает максимума;
 D_1 - постоянная затухания маятника;
 D_2 - постоянная затухания гальванометра;
- коэффициент электрической связи между сейсмографом и гальванометром;
 V_m - увеличение системы сейсмограф-гальванометр для колебаний с периодом T_m
4. До 15 сентября 1958 г. регистрация на комплекте сейсмографов общего типа велась при загрузлении: для $Z - \beta = 1$; для I, П и Ш - $\beta = 2$. После 15 сентября 1958 г. загрузление увеличено: для $Z - \beta = 2$; для I, П и Ш - $\beta = 5$.
5. Скорость регистрации: а) на комплекте аппаратуры общего типа - 30 мм/мин; на комплекте аппаратуры регионального типа - 60 мм/мин.
6. Почтовый адрес: Мурманская область, п/о Апатиты, Сейсмическая станция.
Телеграфный адрес: Апатиты Мурманской Сейсмостанция.

**⁾ Повторная регулировка и определение постоянных компоненты I произведена 10 октября 1958 г.

БЮЛЛЕТЕНЬ ЗЕМЛЕТРЯСЕНИЙ

Июль-декабрь 1958 г.

ОБЪЯСНЕНИЕ ОБОЗНАЧЕНИЙ

- P - продольные волны;
 P* - продольные волны, диффрагированные на границе гранитного и базальтного слоев;
 \bar{P} - продольные волны, распространяющиеся в гранитном слое;
 P_m - максимальная амплитуда продольных волн;
 P_{CP} - продольные волны, отраженные от поверхности земного ядра;
 PP, PPP - продольные волны, отраженные от земной поверхности;
 PKP - продольные волны, преломленные ядром;
 PKKP - продольные волны, преломленные ядром и претерпевшие отражение внутри ядра;
 pP - продольные волны, отраженные от земной поверхности вблизи эпицентра;
 pPKP - продольные волны, отраженные от земной поверхности вблизи эпицентра и преломленные ядром;
 S - поперечные волны;
 S* - поперечные волны, диффрагированные на границе гранитного и базальтного слоев;
 \bar{S} - поперечные волны, распространяющиеся в гранитном слое;
 S_m - максимальная амплитуда поперечных волн;
 ScS - поперечные волны, отраженные от поверхности земного ядра;
 SS,SSS - поперечные волны, отраженные от земной поверхности;
 SKS - обменные волны, преломленные ядром, распространяющиеся в оболочке как поперечные и в ядре как продольные;
 SKKS - обменные волны, преломленные ядром и претерпевшие отражение внутри ядра, распространяющиеся в оболочке как поперечные и в ядре как продольные.
 sS - поперечные волны, отраженные от земной поверхности вблизи от эпицентра.
 P S,SP,PPS - обменные волны, отраженные от земной поверхности;
 sP,sPKP,pS - обменные волны, отраженные от земной поверхности вблизи эпицентра;
 PKS,SKP - обменные волны, преломленные ядром;
 L - длинные волны, распространяющиеся по поверхности Земли.
 L_a - волны Лява;
 L_я - волны Релея;

- L_g** - континентальная поверхностная волна;
F - конец наблюдаемых колебаний;
M - максимум поверхностных волн;
i - отчетливое вступление волны;
e - неотчетливое вступление волны;
ei - сильное, но плавное вступление волны;
Δ - эпицентральное расстояние;
Δ* - гипоцентральное расстояние;
h - глубина залегания очага землетрясения;
t₀ - момент возникновения землетрясения;
A - амплитуда колебания почвы;
T - период колебания почвы в секундах;
As - азимут на эпицентр;
ε - угол выхода сейсмической радиации;
M - инструментальная интенсивность землетрясения (Magnitude)
CX - сейсмографы регионального типа (конструкции Д.А. Харина)
СК - сейсмографы общего типа (конструкции Д.П.Кирноса)
Мск - Центральная сейсмическая станция Союза ССР "Москва", Института физики Земли им.О.Ю.Шмидта Академии наук СССР.

Июль 1958

БЮЛЕТЕНЬ МИКРОСЕЙСМ
Июль-декабрь 1958 г.

ОБЪЯСНЕНИЕ ОБОЗНАЧЕНИЙ

- К - индекс характера микросейсм
К = I - микросейсм в группах
К = 2 - непрерывные микросейсм
К = 3 - неправильные микросейсм
. . . - невозможность измерения микросейсм
tt - невозможность измерения микросейсм из-за землетрясения
v - невозможность измерения микросейсм из-за порывов ветра
0 - запись без микросейсм
00 - очень слабые микросейсм, амплитуда меньше 0.1 микрона
T - период микросейсм в секундах
A - максимальная амплитуда микросейсм в микронах.
