# SEISMOLOGICAL BULLETIN

## JANUARY - DECEMBER 1966

This report lists the P-phase recordings obtained at the seismological stations maintained by the Seismological Service of Canada. All earthquakes reported by station operators are included except for local earthquakes with an estimated magnitude less than 3. The association of many of the station readings with U.S.C.G.S.-determined earthquakes is no longer listed, and epicentral and instrumental data on local earthquakes no longer included. However a separate bulletin containing full information on Canadian earthquakes during 1966 will be issued as soon as possible. The seismological stations are divided into two divisions.

EASTERN DIVISION

Alert, N.W.T. - station code, ALE
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was E. Mortensen succeeded by D.A. Peppar.

Baker Lake, N.W.T. - station code, BLC
Owned and operated by the Dominion Observatory. Station seismologist in 1966 was B. Przybylski succeeded by O.J. Jensen.

Coppermine, N.W.T. - station code, CMC
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Edmonton, Alberta - station code, EDM
Owned by the University of Alberta. Operated under contract for the Dominion Observatory by the University of Alberta.

Flin Flon, Manitoba - station code, FFC
Owned by the Dominion Observatory. Operated by the RCAF, Department of National Defence.

Frobisher, N.W.T. - station code, FBC
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Great Whale River, Quebec - station code, GWC
Owned and operated by the Dominion Observatory. Station seismologist in 1966 was E. Cowan, succeeded by G.R. Green.

International Seismological Centre From the ISC collection scanned by SISMOS

EASTERN DIVISION (Cont'd)

Halifax, Nova Scotia - station code, HAL
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by Dalhousie University.

London, Ontario - station code, LND
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the University of Western Ontario.

Montreal, Quebec - station code, MNT
Owned and operated by Jean de Brêbeuf College with contract support from the Dominion Observatory (courtesy M. Buist, S.J., Director).

Mould Bay, N.W.T. - station code, MBC
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was W.T. Pichê succeeded by T.D. Moore.

Ottawa, Ontario - station code, OTT
Owned and operated by the Dominion Observatory.

Resolute, N.W.T. - station code, RES
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was A. Taylor succeeded by A. Rantamaa.

Saint John's, Newfoundland - station code, STJ
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by Memorial University.

Scarborough, Ontario - station code, SCB
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Schefferville, Quebec - station code, SCH
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by McGill University Sub-Arctic Research Laboratory.

Sept-Iles, Quebec - station code, SIC
Owned and operated by the North Shore and Labrador Railway Company, Sept-Iles, P.Q., with contract support from the Dominion Observatory.

Seven Falls, Quebec - station code, SFA
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was J.B. Racine.

Yellowknife, N.W.T. - station code, YKC
Owned and operated by the Dominion Observatory. Station seismologists during 1966 were R.L. Hewitt and M.A. Nimmo.

International Seismological Centre From the ISC collection scanned by SISMOS

WESTERN DIVISION

Banff, Alberta - station code, BAN
Operated by the Banff School of Fine Arts with contract support from the Dominion Observatory.

Fort St. James, British Columbia - station code, FSJ
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was T.S. Browne.

Mica Creek, British Columbia - station code, MCC
Vault owned and operated by B.C. Power & Hydro Authority, but instrumented by the Dominion Observatory.

Penticton, British Columbia - station code, PNT
Owned and operated by the Dominion Observatory. Station seismologist during 1966 was M. Wilde.

Port Hardy, British Columbia - station code, PHC
Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Suffield, Alberta - station code, SES
Owned by the Dominion Observatory. Operated for Dominion Observatory by Defence Research Board, Department of National Defence.

Victoria, British Columbia - station code, VIC
Owned and operated by the Dominion Observatory. The operating centre of the western division is the Dominion Astrophysical Observatory, Department of Energy, Mines and Resources, R.R. #7, Victoria, B.C.

A first-order standard station was commissioned during 1966 at Suffield, Alberta, on May 11, 1966. A second-order station at Mica Creek, B.C., commenced operations July 1. Mica Creek replaces the second-order station at Banff which closed down on September 22, 1966.

Records for all stations of the Seismological Service are stored on 35-mm microfilm in Ottawa. Positive microfilm copies or full-scale prints of records prior to July 1, 1966, are available to cooperating institutions on request to the Chief of the Division of Seismology, Dominion Observatory, Carling Avenue, Ottawa 3, Ontario, Canada. From July 1, 1966, all records from the Canadian Standard Seismograph Network have been sent to the Seismological Data Centre, National Weather Records Centre, Federal Building, Asheville, North Carolina 28801, U.S.A., for microfilming with the American WWSSN (World Wide Seismic Station Network) records. This step has been taken to make the records more widely available to the international seismological community. Requests for copies of records after July 1, 1966, should therefore be addressed to the above centre, from which a schedule of charges is available. This

International Seismological Centre From the ISC collection scanned by SISMOS

new procedure will make better copies of Canadian seismograms more freely available than has been possible in the past.

Magnification curves for all the various seismographs operated at the stations are found on the following pages; an estimated calibration only is available for Banff. The remaining curves are obtained by application of the Willmore bridge method on site. Earlier bulletins have given an explanation of these curves: the magnification and acceleration sensitivity of any instrument is simply determined by multiplying the velocity sensitivity by $\frac{2\pi}{T}$ or $\frac{T}{2\pi}$, respectively. The magnification curves show the periods of the seismometers and the galvanometers, and summary information on the coordinates, altitude, foundation material and date of calibration is included.

The phase response as a function of period of the various seismographs has been calculated in Ottawa, whenever useful, by using a digital computer. Such information is available on request. When the Canadian standard seismic network is nearer completion, and some instrumental settings no longer experimental, a bulletin will be issued containing the phase response calibration curves.

Following the calibration curves, computer listings are given of the P phases recorded at the stations of the network. This information is identical to that supplied immediately from certain selected stations to the United States Coast and Geodetic Survey for preliminary epicentral determinations, and from all stations with a time lag of several months to the International Seismological Centre and elsewhere for the definitive epicentral catalogues. The station three-letter code is followed by the day of the month, the P onset in hours, minutes and seconds (tenths of seconds if impulsive) and either emergent (EP) or impulsive (IP) phase character. Wherever possible the direction of first motion of the short period vertical seismograph is indicated by either a C for compression or a D for dilatation. The listing from the station data supplied on punch cards to international organizations has been machine sorted into chronological order for each month of the year.

Mr. R.J. Halliday continued as engineer-in-charge of quality control of the seismic network and Mr. F. Lombardo as the senior technical officer for station maintenance, calibration and installation. Dr. F. Kollar was in charge of the central seismological laboratory in Ottawa supporting and servicing the network.

Kenneth Whitham
Chief, Division of Seismology

International Seismological Centre From the ISC collection scanned by SISMOS

## 1966 BULLETIN NOTES

**BANFF**

On May 21 a polarity check was made on the S. P. Z. seismograph and it was found to be reversed. This reversal existed probably from April 1964. Polarity was corrected on May 21, 1966. Direction of motion as illustrated on the seismograms from January 1 - May 21, 1966, are incorrect and should be read as dilatation up. The directions printed in the bulletin have been corrected for this error. The station was closed down at 23:18 on September 22, 1966.

**COPPERMINE**

The L. P. E. W. galvanometer was replaced July 5. From August 2 to August 6 inclusive, time corrections are uncertain because of a technical error. The error may be between 0 and 3.8 seconds.

**EDMONTON**

Between May 23 and 25 all seismograph instruments were recalibrated. The L. P. Z. showed a drastic change in period. Polarity checks made in April 1967 indicate the L. P. N. S. and L. P. E. W. were reversed for the entire year. During the period July 5 to September 29, the S. P. Z. transmission was raised 10 per cent, while those for the S. P. Horizontals were raised 20 per cent.

**LONDON**

From November 22 to 25, London was disturbed with repairs in progress.

**MICA CREEK, B. C.**

A second-order station was commissioned July 1, 1966. Equipment consists of a Mk I Willmore S. P. Z. seismometer, amplifier, helicorder hot-pen recorder, crystal clock and associated radio.

**MONTREAL**

From November 6, 1965, to April 15, 1966, the L. P. N. S. Columbia sensitivity was much greater than indicated on the calibration curves, because of a resistive change in the attenuator.

**MOULD BAY**

On August 17, the periods for the L. P. Z. and L. P. E. were reset to previous calibrated values. The L. P. Z. period was found to be 18 seconds and the L. P. E. period was found to be 16 seconds.

**OTTAWA**

On January 28, an addition was made to the L. P. E. W. seismometer, and the polarity was checked.

| | |
|---|---|
| SCARBOROUGH | Since this station is primarily operated as a training school, records are not continuous throughout the year. The station was closed during the following intervals: July 1-4, July 10-31, August 1-15, December 9-31. |
| SUFFIELD | A six-component Canadian Standard Station was commissioned May 11, 1966. The S.P. seismographs were calibrated May 17 and the L.P. seismographs set to 15-second periods and calibrated May 18-19. |
| VICTORIA | A new L.P.Z. instrument was installed and calibrated May 6, 1966. On September 2, two orthogonal Wood Anderson seismographs were installed with 0.8-second periods and magnification 2800, together with an insensitive torsion seismometer, magnification 100 and 0.8-second period. |
| YELLOWKNIFE | On February 17, the S.P.N.S. polarity was found reversed and corrected. This condition existed since August 16, 1965. |
