5. Results of Seismic Observations at Průhonice, Praha and Kašperské Hory in 1969	XI
6. Macroseismic Observations	307

The seismic data of the seismological stations at the three mentioned towns of the Czechoslovakia Republic were recorded during 1969 by the Institute of Seismology of the Czechoslovak Academy of Sciences at its station Průhonice (Bull. 1970). The operation of the stations Praha and Kašperské Hory has been suspended because of the reconstruction of the former. The results of the measurements of the stations are published monthly from the Bull. 1970.

The seismic data of the stations are referred to the following years: 1968, 1969, 1970. The data of 1968 and 1970 have been used. Individual calibration curves (IC, IC₁, IC₂) have been used also for the magnitude determination based on the amplitudes of the body and surface waves as measured on the microseismograph records. Magnitude curves for Průhonice and Kašperské Hory are given on the page 307.

The preliminary analysis of data was performed by M. Šulc (1970), J. Šimáček (1970) and M. Šimáčková (1970). The annual bulletin was prepared and edited by Karel L. Dvořák (1970), Miroslava Šimáčková, Jana Blažíčková and Ivana Šimáčková. Mrs. E. Černáová performed the systematic preparation of the tables.

Introduction

The present issue of the annual Seismological Bulletin edited by the Geophysical Institute of the Czechosl. Acad. Sci. contains the final interpretation of seismograms recorded during 1969 by the Czechoslovak seismological stations Průhonice (PRU), Praha (PRA) and Kašperské Hory (KHC). The operation of the station Praha was interrupted from September 9 because of the reconstruction of the seismic vault. The arrangement of data and the method of interpretation remain the same as in the preceding issue (Bulletin 1968).

The parameters of events are quoted mostly from the I.S.C. bulletin, as well as the epicentral distances D. The values of D in parentheses have been determined for an unknown epicentre only according to the record analysis. The local shocks with distances smaller than 1° at all stations were omitted; they were published in a special bulletin.

For the analysis of the records the Jeffreys-Bullen travel times /3/, Gutenberg-Richter travel times /4/, Bolt tables /9/ and special local tables /1, 2, 5, 6, 7, 8/ have been used. Individual calibrating curves /10, 11, 12/ have been used also for the magnitude determination based on the amplitudes of the body and surface waves as measured on the Kirnos-seismograph records. Magnification curves for Průhonice and Kašperské Hory are given on the page VII.

The preliminary analysis of data was performed by Mr.J.Nykles (PRU), Mr.J.Janský (PRA) and Mr.B.Závorka (KHC). The annual bulletin was prepared and edited by Mrs.L.Ruprechtová, Miss J.Plomerová, Mrs.D.Procházková and Mr.J.Janský. Mrs.S.Černíková performed the technical preparation of the issue.

List of Symbols

Symbols generally used are not introduced

T_1	= free period of the seismometer
T_2	= free period of the galvanometer
V_o	= static magnification
V_m	= maximum magnification
$\xi : 1$	= damping ratio
D_1	= damping constant of the seismometer
D_2	= damping constant of the galvanometer
G^2	= coupling coefficient
D	= epicentral distance calculated using the geocentric coordinates of the station and the epicentre
(D)	= epicentral distance determined from the analysis of the record
PKP	= core wave, not precisely identified
PKIKP	= core wave travelling through the Earth's inner core
PKHKP	= core wave refracted on a discontinuity between the outer and inner core boundaries, preceding PKIKP at distances smaller than about 142° and following it at larger distances
PKP ₂	= core wave penetrating only into the outer core
L, Lm	= long period surface wave and its maximum
LH	= maximum horizontal amplitude of surface waves
Q, Qm	= Love wave and its maximum
R, Rm	= Rayleigh wave and its maximum
PH, PPH, SH	= maximum horizontal amplitude of the wave in question measured in the record of the intermediate-period Kirnos seismograph
PV, PPV, SV	= maximum vertical amplitude of the wave in question measured in the record of the intermediate-period Kirnos seismograph
PV ₁ , PV ₂	= maximum vertical amplitude of the P wave measured in the record of the short-period vertical seismograph in the time interval 5sec or 20sec after the first onset, resp.
MPH, MPV, MPPH, MSH	= magnitude determined using the amplitudes mentioned above
m	= body wave magnitude determined using the maximum P-amplitude measured in the record of the short-period vertical seismograph
m ₁ , m ₂	= magnitude determined using the two maxima PV ₁ and PV ₂ , resp.
M	= surface wave magnitude
u, mu	= used instead of correct μ , μu

List of the Stations

Práhonice (PRU)

Station coordinates: $\varphi = 49^{\circ}59.3'N$, $\lambda = 14^{\circ}32.5'E$

Elevation: $h = 302$ m

Lithologic foundation: Algonkian layers

Instruments:

1, 2 = Vertical electrodynamic seismograph SVSN, short-period,
developed by V. Tobyáš and J. Štěpánek, galvanometric recording

3, 4 = Electrodynamic seismograph Kirnos, intermediate period, com-
ponent Z, E, N, galvanometric recording

Kašperské Hory (KHC)

Station coordinates: $\varphi = 49^{\circ}07.8'N$, $\lambda = 13^{\circ}34.8'E$

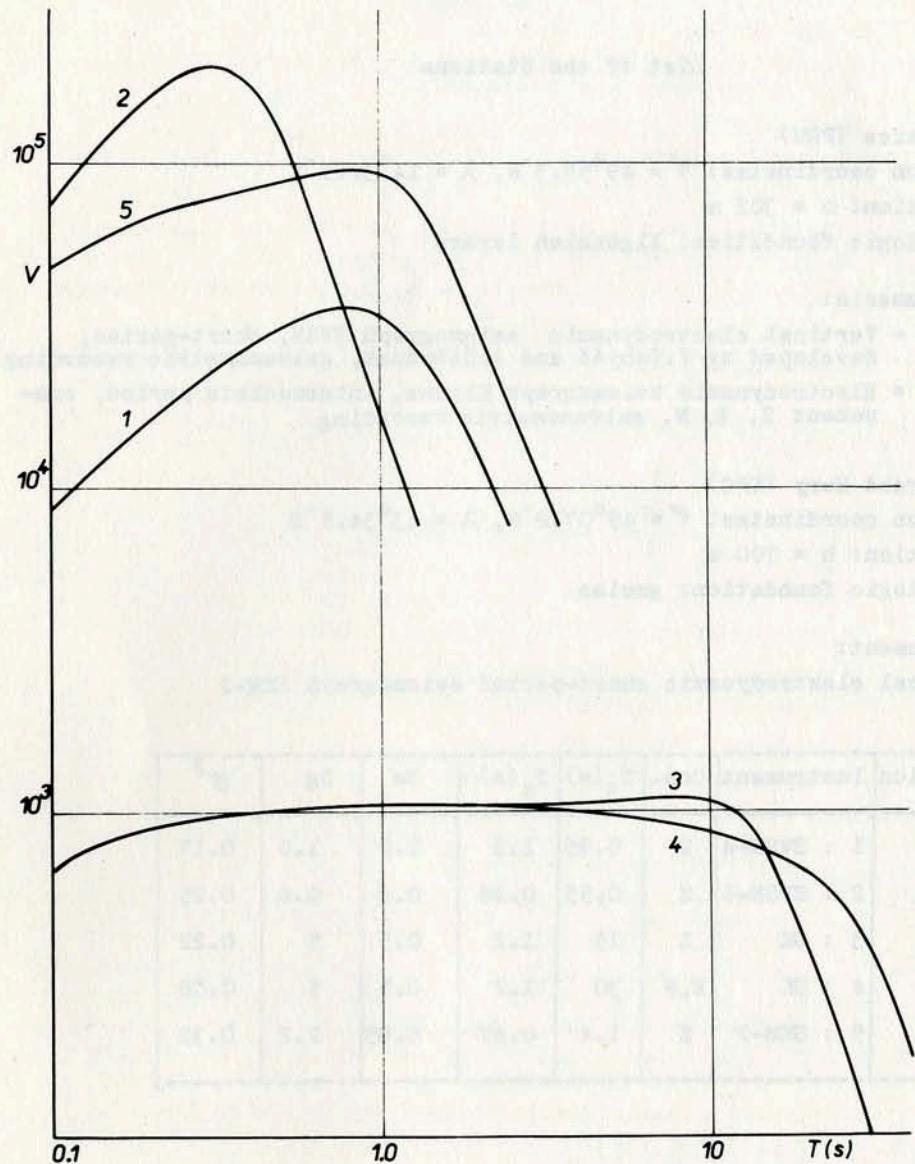

Elevation: $h = 700$ m

Lithologic foundation: gneiss

Instrument:

Vertical elektrodynamic short-period seismograph SKM-2

Station	Instrument	Com.	T_s (s)	T_g (s)	Ds	Dg	σ^2
PRU	1 : SVSN-4	Z	0.96	1.5	1.0	1.0	0.17

PRU	4 : SK	E,N	30	1.2	0.5	5	0.08
KHC	5 : SKM-2	Z	1.4	0.67	0.85	2.2	0.35

Magnification curves for Průhonice and Kašperské Hory

Praha (PRA)

Station coordinates: $\varphi = 50^{\circ}04'13''$ N, $\lambda = 14^{\circ}25'59''$ E

Elevation: $h = 225$ m

Lithologic foundation: Ordovician schists (Záhořany layers)

Instruments:

1 = Seismograph Wiechert, mass 1000 kg, air damping, components N, E, mechanic recording

2 = Seismograph Kirnos, components N, E, Z, galvanometric recording
